

STUDENTS ARE INVITED TO AN INTERACTIVE EVENT

with challenges on

Cycle of Development: Innovation, Technology and Entrepreneurship

About the event

Creation of an innovation and entrepreneurial ecosystem is a major goal of education. The scientific and industrial research system also depends to a very large extent on the propagation of innovation skill-sets. We have to ensure that in educational institutions, students are encouraged to innovate, and to come up with entrepreneurial ventures so as to become “Job givers” rather than “Job seekers”. How successful are we in our endeavor? The session on “Cycle of development: Innovation, Technology and Entrepreneurship” includes interactive brainstorming game for participants which brings out how to make innovation and entrepreneurship a quintessential part of our learning and pedagogy. Through this fun-filled brainstorming game, students will be generating ideas and queries, clustering and finally sharing them with all. The outcome of this workshop is to get inspired to think out-of-box and to enhance activities in innovation, technology and entrepreneurship development.

Why to attend this interesting event?

- To get inspired to do things differently
- To nurture yourself to be creative
- To create an innovation and entrepreneurial ecosystem
- To get connected to grass root innovators
